

DRM Custom Dunnage (returnable plastic packaging)

DRM Industries uses proven expertise, industry-leading knowledge, and innovation to implement plastic reusable packaging systems to help customers significantly reduce their costs and sustain system-wide optimization. With many years of design, DRM Industries provides pallets and custom dunnage that will perform well in your operation, day after day and year after year.

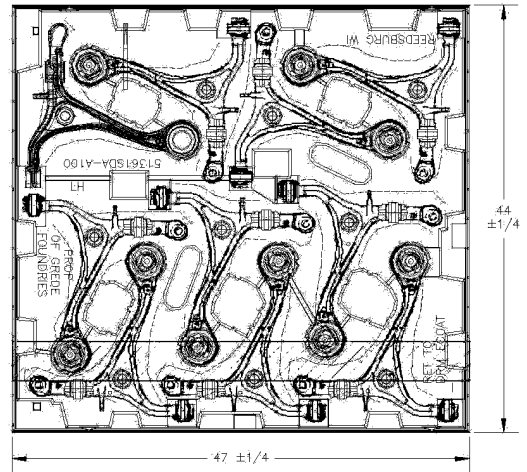

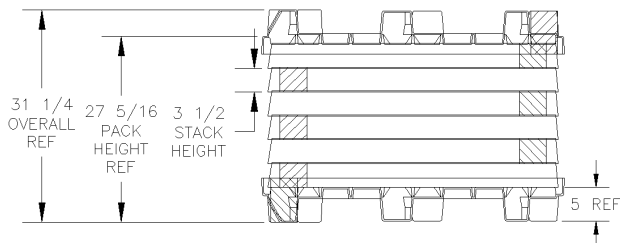

As plastic reusable packaging products seek to replace one-time use corrugated shipping and limited-use wood pallets, customers experience a rapid return on their investment, many times in 12-18 months.

Companies in many industries have converted from wood to plastic pallets for their work-in-progress, storage and distribution applications. They recognize the economic, ergonomic and environmental benefits that plastic pallets bring to their operation.

Reusable packaging is used in a wide range of industries, including automotive, beverage, food, electronics, pharmaceutical, textile, printing and apparel.

Custom dunnage designing requires length, width, height, application, nestable pallets, stackable, straight wall, high quality, high-performance

Plastic returnable packaging has brought many customers significant financial and operational benefits.

Reusable packaging is based on many factors of the customers including: volume of product, product life cycle, and frequency of shipments, inventory velocity, storage practices and product protection requirements.
